

How GPS Tracking works

A **GPS Tracking Box** is installed inside a vehicle. It is invisible to the driver.

The **GPS System (global coverage)** is used to locate the GPS position of the GPS Tracking Box.

The GPS Tracking Box transmits its **position via GPRS SIM cards** to the GPS Fleet Software.

You can use a **PC with internet** to connect to the GPS Fleet Software to track your vehicle(s).

GPS Fleet Software Benefits

You can monitor every turn of your assets live almost in real-time. Additionally you benefit from past trip routes, tracks, driving times, speeding alerts and reports (12 months).
